Important

There are a few guidelines you must follow in this homework. If you fail to follow any of the following guidelines you will receive a $\mathbf{0}$ for the entire assignment.

Due: Oct 27, 11:55 PM

- 1. All submitted code must compile under JDK 7. This includes unused code, don't submit extra files that don't compile. (Java is backwards compatabile so if it compiles under JDK 6 it *should* compile under JDK 7)
- 2. Don't include any package declarations in your classes.
- 3. Don't change any *existing* class headers, constructors, or method signatures. (It is fine to add extra methods and classes)
- 4. If you write extra constructors that are not the ones provided or specified in the assignment we will **not** use them. If your code requires your own personal constructors to be used rather than the provided ones you need to rethink your implementation.
- 5. Don't import anything that would trivialize the assignment. (e.g. don't import java.util.LinkedList for a Linked List assignment. Ask if you are unsure.)
- 6. You must submit your source code, the .java files, not the compiled .class files.

After you submit your files redownload them and run them to make sure they are what you intended to submit. We are not responsible if you submit the wrong files.

Graph Search

You will be implementing different graph search algorithms in this assignment, read the javadocs for descriptions on how you should take in the input and what you should return.

Deliverables

You must submit all of the following files.

- 1. GraphSearch.java
- 2. StructureQueue.java
- 3. StructureStack.java

You may attach them each individually, or submit them in a zip archive.
